

# Primary care and behavioral health providers:

Working together to treat the whole person

Medicaid Managed Care

Why PCPs and BH providers should work together	When PCPs and behavioral health providers should exchange health information	Tips and tools for screening and follow-up care	
<ul style="list-style-type: none"> <li>• <b>Physical and behavioral health go hand in hand.</b> Comorbid conditions can complicate treatment of and recovery from both physical and behavioral health issues. A member is more likely to stick to a medical treatment plan if his or her behavioral health needs are properly met and vice versa.</li> <li>• <b>Collaboration leads to well-informed treatment decisions.</b> Providers work together to develop compatible courses of treatment, increasing the chances for positive health outcomes and avoiding adverse interaction.</li> <li>• <b>Sharing relevant case information in a timely, useful and confidential manner is a requirement for Anthem Blue Cross and Blue Shield Healthcare Solutions.</b> We abide by standards set by the National Committee for Quality Assurance (NCQA) requiring health plans to ensure coordination of care between PCPs and behavioral health providers.</li> </ul>	<ul style="list-style-type: none"> <li>• When a member first accesses a physical or behavioral health service</li> <li>• When a change in the member's health or treatment plan requires a change to the other provider's treatment plan (for example, when a member who has been taking lithium becomes pregnant)</li> <li>• When a member discontinues care</li> <li>• When a member is admitted to or discharged from the hospital</li> <li>• When a member is admitted and a consultation is warranted</li> <li>• When a member has a physical exam and/or laboratory or radiological tests</li> <li>• Once a quarter if not otherwise required</li> </ul>	<p><b>When screening for substance abuse and depression ...</b>                      ... please use standard screening tools or the brief screening questions below. If your patient's answer to any of these questions is yes, refer the patient for a complete behavioral health evaluation. Contact us if you need help making this referral. Screenings should be completed annually.</p>	
		<p>In the last year, did you ever drink or use drugs more than you meant to?</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>
		<p>Have you felt you wanted or needed to cut down on your drinking or drug use in the last year?</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>
		<p>Over the past two weeks, have you felt down, depressed or hopeless?</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>
		<p>Over the past two weeks, have you felt little interest or pleasure in doing things?</p>	<p><input type="checkbox"/> Yes <input type="checkbox"/> No</p>

# Doing well means doing well together for our members

HEDIS® is a program developed by the NCQA to measure how effectively health plans and providers deliver preventive care. Together, we can help keep our members healthy with a few actions.

Follow-up visits after substance abuse diagnoses	Antidepressant medication management	Follow-up visits after ADHD diagnosis
<p>People who stay in treatment for 90 or more days are less likely to use drugs after they are discharged. If treatment time is increased to 180 days, the likelihood of drug use after discharge falls more than 50%.</p> <p>Per HEDIS requirements, all patients with newly diagnosed substance abuse should be seen:</p> <ul style="list-style-type: none"><li>• At least once within 14 days of being diagnosed.</li><li>• At least two or more times within 30 days of the initial visit.</li></ul> <p>It's important to make sure patients begin treatment immediately upon diagnosis of substance abuse. If you need help arranging treatment for a newly diagnosed patient, call Provider Services.</p>	<p>Depressive disorders can have a significant negative impact on a patient's quality of life and health care outcomes, and they are often diagnosed and initially treated in primary care. You should regularly monitor patients you're treating with antidepressant medications. Patients should also be maintained on these agents to allow for adequate trials.</p> <p>We strive to meet the HEDIS goals for assessing the adequacy of the medication trials for members 18 years of age and older diagnosed with a new episode of major depression and treated with (and kept on) antidepressant medication.</p> <ul style="list-style-type: none"><li>• Effective acute phase treatment — the percentage of newly diagnosed and treated members who remained on an antidepressant medication for at least 84 days (12 weeks)</li><li>• Effective continuation phase treatment — the percentage of newly diagnosed and treated members who remained on an antidepressant medication for at least 180 days (6 months)</li></ul> <p>We are here to help you ensure an adequate medication trial for patients whose treatment plan includes medication. Please call Provider Services if you need help.</p>	<p>ADHD is a complicated disorder whose treatment often involves a combination of counseling and medication. If treatment involves medication, it is very important to monitor this closely. We have adopted the HEDIS follow-up goals for medication follow-up:</p> <ul style="list-style-type: none"><li>• At least one follow-up visit with a practitioner within a month of the first prescription of ADHD medication for all children 6 to 12 years old diagnosed with ADHD</li><li>• At least two more follow-up visits in nine months for children who remain on the medication for at least 210 days</li></ul> <p>We can help you arrange follow-up visits for children with ADHD — just give Provider Services a call.</p>

## We're here to help!

We encourage you to use the Coordination of Care Form so you can cover all the bases when sharing information with your fellow providers. Log on to our secure provider website to access the form.
