

Sterilized Packages Inspection Log

Sterilized items are considered sterile until use unless an event causes contamination. Sterilized items are not considered sterile if the package is opened, wet or moist, discolored, or damaged. Compromised packages shall be removed from the sterile package storage area and immediately repackaged, relabeled, and re-sterilized. Entries below indicate routine evaluation of the integrity and condition of sterilized packages according to the site's written schedule. These inspection logs shall be accessible on site for at least three years.

Directions:

Staff shall initial the appropriate box (month and day) indicating when routine inspections occurred. Staff shall initial and sign the bottom of this form for proper identification.
